1.0 Introduction To Company Background

- SERI SEGI GROUP
- Established in 1995
- Incorporated in 2003
- Dedicated staff of more than 400 employees nationwide

The company's priority is to deliver the best food & beverages services to cater domestic and global market demands, with the support of owned fully integrated central kitchen (FICK). We expanded the business portfolio with our event management packages with experienced team and involved with comprehensive maintenance industries in Klang Valley for government and private sectors. Segi Seri owns various unique venues, one of which is known as Laman Kayangan located in Seksyen 7, Shah Alam a fully furnished exclusive marquee tent for corporate functions, social gatherings and weddings.

In addition, Segi Seri has established our name and reputation in both government and private healthcare institutions, such as Hospital Pusrawi, Hospital Sg Buloh, National Cancer Institute and Hospital Pulau Pinang. We have been supplying centralised meal trays, pack meals and therapeutic diets to cater for different patient needs. Our consistent efforts and good practices has led to Hospital Sg Buloh being awarded the Good Manufacturing Practice (GMP) status. We have attained the Halal Accreditation and 4 star rating from SME Corp under the SCORE program. The company has also initiated strategic partnerships and built on good reputation with major clients such as The Setia City Convention Centre (SACC), local city councils, and various government agencies.

The fully integrated central kitchen (FICK) of Segi Seri are fully equipped with chillers, blast freezers, and conveyor line, all to ensure foods that are produced, prepared and served are of the best quality and meets the hygienic satisfactory standards. The new upgraded fully integrated central kitchen (FICK) of 40,000 sq ft are expected for completion by the end of 2018.

Segi Seri is moving towards achieving its goals and mission, and poised for further diversification. We aim to set the standards higher in line with our stated missions to be at the forefront of various industries and to be the leading company in the ever growing halal food processing and packaging industry. Therefore Segi Seri has our own Specialized Training Centre - SS Academy, located at Wisma Segi Seri Shah Alam.

Nowadays, Segi Seri take a tender and open the restaurant at Kedah, which is located at the Menara Alor Setar. The name of the restaurant is Star Sky Restaurant & Lounge. This restaurant provide food services such as for wedding event, corporate event or can be a restaurant that serve great food. This restaurant recently opened 3 March 2019, and greatly improved time by time.

2.0 Problem Statement

To what extent does the efficiency of computers' data management and control about any reservation currently being used by SEGI SERI GROUP, STAR SKY Restaurant according to the situation?

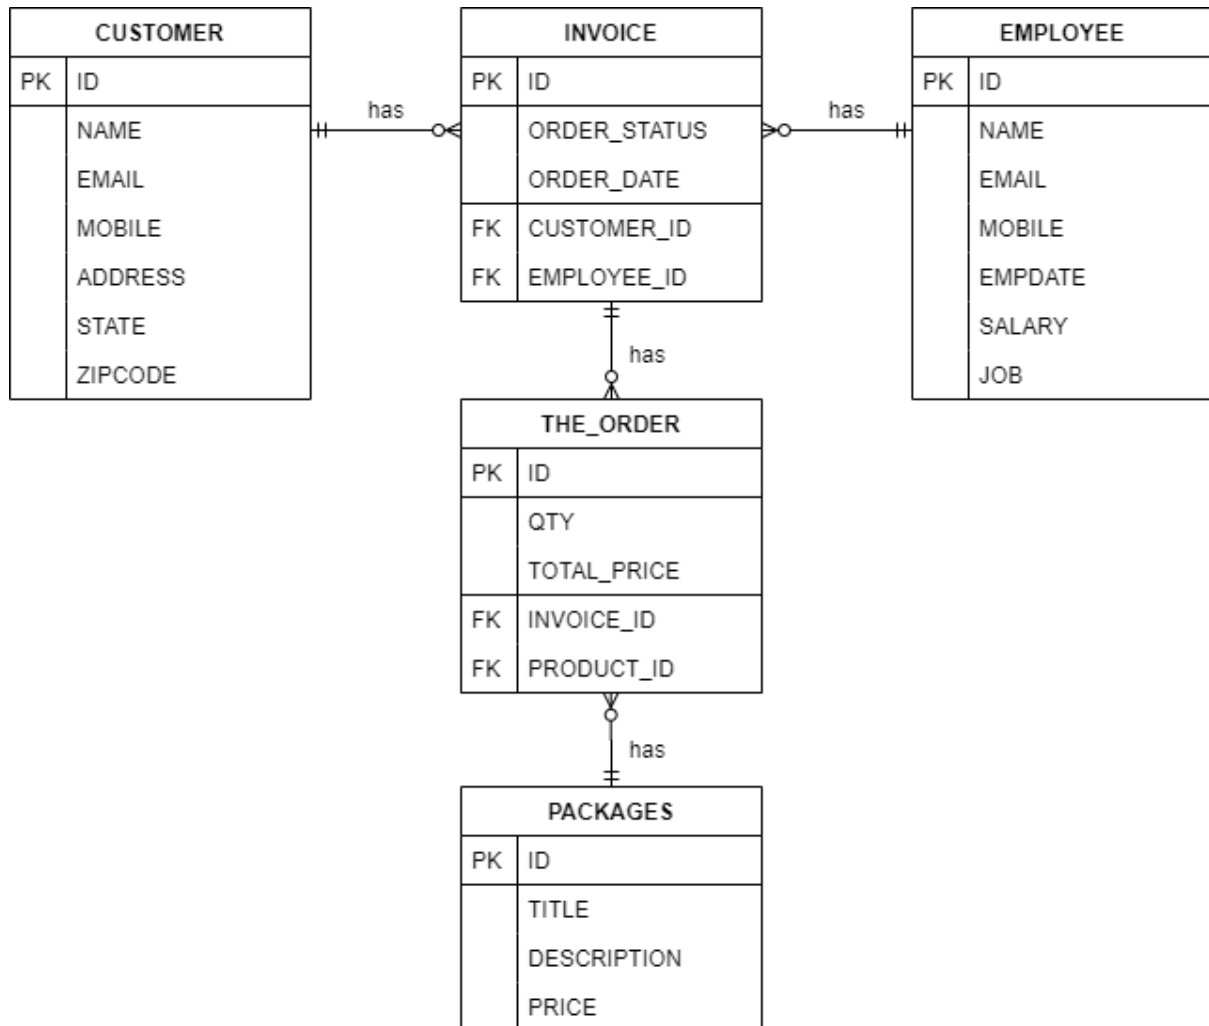

All the computers are managed by an organization. It includes computers being used by staff, manager and president to save any important reservation data for the event. Therefore, the current process of managing computers data is very crucial as it involves lots of data. Unfortunately, almost all record keeping practice of the computers' data is done manually. This means all the data is being recorded in papers, put it in files and later on the files will be piled up in the cabinet. Thereafter there is a strong need to keep track on the record. Using the manual practice, it will be challenging to deal with lots of data. That is because companies need to save many reservations that have been made. Such as venues, packages, supply food, content, accessories and others for any events. Therefore, events are usually made every time due to season. Furthermore, if the manual records being destroyed due to natural hazard such as fire or missing, the data will be lost forever and nothing can be done to obtain it. On the other hand, the organization staff needs a systematic, effective and

efficient mechanism to manage the computers' data in order to fulfil their beneficiaries' needs in order to. Moreover computer data management and control about any reservation not only secure the data and information, but also reduce the process that will make the process of payment and reservation more efficient and effective. So with this system it will ensure the data being protected and easy to control and updated based on the particular department.

3.0 Objective

- i. To help Seri Segi Group, Star Sky Restaurant in organizing and collecting all information in one database system that can be accessed easily and systematically so that the company could achieve a good reputation of providing excellent services and customer satisfaction.
- ii. To develop a comprehensive database that can govern computers' data management for its beneficiaries
- iii. Iii. To help Seri Segi Group, Star Sky Restaurant in creating the best process in the simplest way to make their works more easier in managing the data and transaction method.

DATABASE SYSTEM MANU :

DATABASE SYSTEM CUSTOMER'S FORM:

The screenshot displays the 'Customer Details' form within the StarSky Information System 10.0. The sidebar on the left is expanded, showing sub-options under 'Reservation': 'New Customer' and 'Existing Customer'. The form itself is titled 'Customer Details' and contains a 'Customer' section with the following fields: 'Name', 'Mobile', 'Email', 'Address', 'State' (a dropdown menu), and 'Zipcode'. Each field has a red asterisk indicating it is required. At the bottom of the form are 'Cancel' and 'Register' buttons. The footer status bar is identical to the one in the previous screenshot, showing 'Release 1.0' and utility icons.
